

THE SUSTAINABLE ATTRIBUTES OF EXTERIOR CLADDING MATERIALS

A True Look at "Green" Claims

Prior to making decisions on cladding materials and their impact on the environment, it's important for builders to consider the true facts regarding siding products' green positions. Many materials claim green or sustainable attributes, but a comparison between manufactured stone and brick shows the true story. A quick review of the facts will show that EIFS is not as green as you think.

IN THE MANUFACTURING PROCESS

RECYCLED CONTENT

EIFS

• Industry makes no claims about recycled content.

BRICK

• Contains both pre- and post-consumer recycled content, depending on the manufacturer.

MANUFACTURING AND DISTRIBUTION

EIFS

• NIST confirmed that EIFS has "less global impact" in its distribution due to less fossil fuel required to ship.

BRICK

• Waste products such as methane gas from landfills and sawdust used in production, depending on the manufacturer.

• At least two plants located within 500 miles of all but one of 50 largest MSAs.

THIRD PARTY CERTIFICATION

EIFS

• Industry makes no claims about certification.

BRICK

• Manufacturers can achieve third-party certification for extent of recycled content, use of alternative energy, and amount of resources reduced.

WASTE MANAGEMENT

EIFS

• All construction waste must be sent to a landfill.

BRICK

• Reusable scrap materials, minimal packaging.

• Very little on-site waste produced due to modular units.

ENERGY EFFICIENCY

EIFS

· Position on outside of wall eliminates thermal bridging.

BRICK

• More thermal mass since typical brick veneer thickness is 3 to 3-5/8 inches.

LIFE CYCLE & DURABILITY

EIFS

- 50 year life span.
- Requires additional fi nishing and coating over time.

BRICK

- 100 year life span.
- · Low maintenance requirements.

SAFETY & SECURITY

EIFS

• Does not provide 1-hour fi re resistance rating.

BRICK

- Provides 1-hour fire resistance rating.
- Offers superior resistance to wind-blown debris.

According to experts and certification groups, the future of green home building and sustainable design resides in the life expectancy and life cycle of the building, energy efficiency, and the impact building materials have at the end of their useful life. The Brick Industry offers building professionals a product that assists in all three areas.

BRICK IS A NATURALLY SUSTAINABLE MATERIAL

- Use of abundant natural resources, clay and shale.
- Improved manufacturing processes use less energy and reduce emissions.
- Use of alternative fuel resources such as landfill gas and wood waste materials.
- Strategically located plants to help reduce transport emissions.
- Contributes to energy efficient homes with high thermal mass.
- Long life cycle, durable, low maintenance, no painting required.
- Recyclable and biodegradable thereby reducing its embodied energy.
- A built-in and in-demand market for recycled re-use of old brick.

BRICK IS AN INVESTMENT IN BEAUTY & VALUE

- Consumers prefer brick over other cladding/siding materials.
- Brick's natural beauty is timeless and design possibilities are endless.
- Brick's longevity and local availability make it one of the greenest building products made today.
- Brick conveys a message of quality, image, and prestige about the home builder and community.
- Brick has the longest history of product performance and durability.
- Brick is virtually maintenance-free.
- Brick is a perfect fit within any architectural style.

BRICK: THE GREEN POINTS ADD UP

National Green Building Standard™

Brick can assist in contributing up to 175½ points out of approximately 2,000 possible points

LEED for Homes[™] (USGBC)

Brick can assist in contributing up to 19½ points out of a possible 136 points
